ABOUT THE SPECIAL SESSION

This special session explores technologies that enable renewable energy resources and microgrids to support secure, flexible and resilient power systems. It connects renewable integration during normal operation with maintaining and restoring services during disturbances. The session covers power electronics, distributed energy resources, intelligent control, energy storage and cyber-physical systems. It links advances in grid-forming converters, artificial intelligence, digital twins and distributed optimization with practical operating needs and demonstrated system benefits.

TOPICS OF INTEREST

- Renewable Energy Integration and Grid Flexibility
- Advanced Power Electronics and Grid-Forming Technologies
- Microgrid Architectures and Coordinated Control
- Energy Storage and Integrated Energy Management
- Artificial Intelligence and Digital Twins
- Protection and Cyber-Physical Security
- Grid Resilience and Service Restoration
- Experimental Validation and Practical Deployment
- Intelligent Control of Renewable-Dominated Grids
- AI-Enabled Energy Management Systems
- Advanced EV Technologies
- Green Mobility Solutions
